Subject: RE: Request for final decision for manuscript number 2013/ACSj/4343

The paper entitled "Thermodynamics of the solvation of lead nitrate in mixed DMF-H₂O solvents at 301.15 K" by Esam A. Gomaa should not be published in American Chemical Science Journal.

I have carefully reviewed all the documentation received on this work. I consider very important the revisions indicated by the four previous reviewers.

Some of these problems have been addressed and corrected by the author in the next version of the work. However, there are major deficiencies in the rest of the paper.

Some corrections have not been addressed by the author, although he indicated that the deficiencies were corrected. There are no detectable changes between the second and third version.

Therefore, and considering the lack of scientific standards in this paper, I recommend that this paper should not be published in American Chemical Science Journal) at least in the current version).

Editor's Details:

Francisco Marquez-Linares
