

Editorial Comment:

The submitted manuscript (2014_BJMMR_13461) is interesting. However, it needs revision before publication. The statistical methods should be omitted in the abstract. List of references does not pass criteria of BJMMR.

Author's feedback:

'Statistical methods' in the abstract it is heavily trimmed.

We have used the very relevant references and we have nothing much to add to it.

The manuscript was already revised thrice before.
