

Editorial Comment:

With all my respect to the authors but the list of references should be uniform. All articles have to be presented the same way. However, as I wrote before the submitted version still does not follow the criteria of BJMMR (see 3, 18, 27, 30). Punctuation has to be also corrected. All double or multiple spaces should be omitted. Usually it is author responsibility to prepare the manuscript for publication and for review process. The current version of the paper needs correction before publication.

Author feedback:
