

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Medicine and Medical Research
Manuscript Number:	2015_BJMMR_17582
Title of the Manuscript:	Immediate Adverse Reactions and Anaphylaxis associated with gadolinium-based contrast agents in a patient with meningioma: case report and literature review
Type of the Article	Case report

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>Please review my previous comments:</p> <ol style="list-style-type: none"> 1. Abstract is still lacking in clarity. In the object subchapter, third sentence, the authors quote a paper with no context or reference "The incidence of immediate hypersensitivity reactions to MR contrast media was 0.079%, and the recurrence rate of hypersensitivity reactions was 30% in patients with previous reactions." 2. Comment #2 is only partially dealt with. There are 4 types of hypersensitivity reactions. The authors should clear up what they mean (saying severe immediate hints towards type-I, but this is not stated). 3. Comments #2-#4, #6-#9 are unmet. 4. Plagiarism issues are very concerning. I cannot recommend this paper even if other corrections are made before this issue is addressed.
