

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Medicine and Medical Research
Manuscript Number:	2015_BJMMR_17582
Title of the Manuscript:	Immediate Adverse Reactions and Anaphylaxis associated with gadolinium-based contrast agents in a patient with meningioma: case report and literature review
Type of the Article	Case report

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
I just would like to know why the patient did not sate the previous symptom before she underwent contrast MRI again. Usually the medial staffs have to ask the patient about it. It is the best way to prevent contrast allergy. Or, the patient had mental retardation or something like that? Or, the check was not done?
