

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	British Journal of Medicine and Medical Research
Manuscript Number:	Ms_BJMMR_19678
Title of the Manuscript:	A New Anionic Bovine Tendon as Scaffold for the Repair of Bone Defects: A Morphological, Histomorphometric and Immunohistochemical Study
Type of Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>The authors have addressed the comments in general. Regarding Fig. 2, it is still a bit confusing about the statistical significance indication. For A, C and D, it seems that statistical differences were indicated between group "a" and group "b". However, it is hard to interpret for panel B, especially when group "c" is compared to group "a" or "b" as both are also indicated for 15 days and 30 days respectively. Does the indicated letters indicate that there are significant differences among all groups? Please consider using other forms of indication such as using lines graphically.</p>
