Subject: RE: Request for final decision for manuscript number 2013_INDJ_6192

Although reviewer 2 gave a major revision to the manuscript with concerns about the length and focus of the article, I do agree with the Reviewer 1 and authors that the manuscript is well written with extensive details for both experts and new readers. However, I have concerns regarding to the newly added PPAR section. I do suggest the authors to cite following original research papers in this field: "Cannabidiol reduces A β -induced neuroinflammation and promotes hippocampal neurogenesis through PPAR γ involvement." PMID: 22163051, " Δ^9 -tetrahydrocannabinol (Δ^9 -THC) exerts a direct neuroprotective effect in a human cell culture model of Parkinson's disease." PMID: 22236282, and "Cannabidiol protects oligodendrocyte progenitor cells from inflammation-induced apoptosis by attenuating endoplasmic reticulum stress." PMID: 22739983.

I suggest the International Neuropsychiatric Disease Journal to publish their work after they have addressed the above comments.
